

Applied Principles of Terminology Work

**Terminology Summer School - Cologne
11 - 15 July 2011**

Klaus-Dirk Schmitz

Institute for Information Management
Faculty 03

Cologne University of Applied Sciences

klaus.schmitz@fh-koeln.de

Content

- **Definitions, short historical overview**
- **Terminology working methods**
- **Terminology projects**
- **Special issues of terminology work** (term, definition, context, documentation, maintenance)
- **Terminology standardization** (companies, TC37)
- **Terminology workflow**

Terminology work

- **terminology work**

work concerned with the systematic collection, description, processing and presentation of **concepts** and their **designations**

- ~~terminography~~ **terminology management**
part of **terminology work** concerned with the recording and presentation of **terminological data**

NOTE: Terminological data may be presented in the form of term banks, glossaries, thesauri or other publications.

Short history: first approaches

- In Central Europe, the first approaches to elaborate and order the terminology of a specific domain started several centuries ago:
 - **DÜRER (1471-1528) Mathematics**
 - **VESALIUS (1514-1564) Anatomy**
 - **LAVOISIER (1743-1793) Chemistry**
 - **BERTHOLLET (1748-1822) Chemistry**
 - **von LINNE (1707-1778) Botany und Zoology**
- Some of the developed nomenclatures are still valid and used today (e.g. Vesalius, Linne)

Below: a page from a German–Latin school book, *Teutsch lateinisches Wörter-Büchlein*
 Printed around 1722, it contains about 6,000 words, each of which is illustrated.

	Thor Porta. f. 1.		Bestung Arx. f. 3.		Wirtshaus Diverforium. n. 2.
	Kirch Templum. n. 2.		Thur Turris. f. 3.		Garlücke Caupona. f. 1.
	Kloster Monasterium. n. 2.		Hohe Schul Academia. f. 1.		Kaufstaden Stram Tabernaculum. f. 1.
	Palast Palatium. n. 2.		Schul Schola. f. 1.		Fleischbant Macellum. n. 2.
	Rathhaus Curia. f. 1.		Gasse Vicus. m. 2.		Gefängnuß Carcer. m. 3.
	Stechhaus Nofodochium. n. 2.		Engt Gasse Augiporcus. m. 4.		Brude Pont. m. 3.
	Spittal Xenodochium. n. 2.		Breite Gasse Platea. f. 1.		Krautmarkt Forum olitorium. n. 2.
	Finbel Brophotrophium.		Treuhgasse Compium. n. 2.		Roßmarkt Forum equestrarium. n. 2.
	Brüderhaus Adelphotrophium. n. 2.		Bad Balneum. n. 3.		Ochsenmarkt Forum Boarium. n. 2.
	Zeughaus Armamentarium. n. 2.		Markt Forum. n. 2.		Speißmarkt Forum equestrarium. n. 2.

Early terminological dictionaries

- **Alfred Schlomann**, a German engineer, elaborated and published systematically arranged technical dictionaries with illustrations
- Each dictionary covers (all) the concepts of a specific domain
- Between 1906 and 1928, 16 volumes of his “illustrated technical dictionaries in 6 languages” („Illustrierte Technische Wörterbücher in 6 Sprachen“) were elaborated
- Each volume contains between 400 and 2000 pages

HEBEMASCHINEN UND TRANSPORTVORRICHTUNGEN

In sechs Sprachen:

Deutsch, Englisch, Französisch, Russisch, Italienisch, Spanisch

Unter redaktioneller Mitwirkung von

Dipl.-Ing. Paul Stülpnagel

Mit 1560 Abbildungen und Formeln

зовой канат) (m)
catena (f) o fune (f) da
imbracatura
cadena (f) de dos ra-
males

Early terminological standardization

- 1906 the International Electrotechnical Commission (IEC) was founded in London. The working programme already contains the task to elaborate an international dictionary
- 1938 the first issue of the dictionary was published with about 2000 concepts in 14 sub-domains
- The dictionary contained terms in English, French, Italian, Spanish(, German) and Esperanto with definitions in English and French

Early terminological standardization

- Beginning of page 43 of the IEC dictionary:

Section 10-15. — Moteurs — Motors.

10-15-005	Moteur électrique : Machine qui produit de l'énergie mécanique par transformation de l'énergie électrique.	Electric motor : A machine which produces mechanical energy by the transformation of electrical energy.	Elektromotor Motore elettrico Motor eléctrico Elektromotora
10-15-010	Moteur à courant continu : Moteur électrique destiné à fonctionner avec du courant continu.	Direct-current motor : An electric motor working with direct current.	Gleichstrommotor Motore a corrente continua Motor de corriente continua Motora por kontinua fluo

Early terminological standardization

- 1917 the technical committees of the German Standards Association (DNA = Deutscher Normenausschuss, later called DIN = Deutsches Institut für Normung) established specific sub-committees for terminology
- 1926 the same happens on international level in ISA (International Standards Association, later called ISO)
- Also other national standards bodies established terminological sub-committees

Early terminological standardization

- Example of a terminology standard:
(British Standard 206 (1943) containing concepts and terms in the field of electrical engineering)

SUB-SECTION 26 : PARTS AND TYPES OF WINDINGS

No.	Term	Definition
2601	Drum winding	A winding formed of coils arranged wholly inside or outside a cylindrical core and situated either on the surface or in the slots.
2602	Ring winding TOROIDAL WINDING GRAMME WINDING	A winding formed of coils wound round a magnetic core of annular form, in such a manner that one side of each coil is looped through the ring.

Early terminological standardization

- **Eugen Wüster**
- 1931 Dissertation „Internationale Sprachnormung in der Technik, besonders in der Elektrotechnik“
- 1936 foundation of a technical committee dealing with terminological principles (ISA/TC37, later ISO/TC37)
- To improve the basic principles of terminology for the creation of a standard, Wüster elaborated the systematic dictionary “The Machine Tool” (1967/1968)

The Machine Tool

An Interlingual Dictionary of Basic Concepts

comprising

An Alphabetical Dictionary and
A Classified Vocabulary
with Definitions and Illustrations

English-French Master Volume

*BB Ring

*BB Rolle 01

*BB Rohr 01

*BB Scheibe 01

*BB Tülle

- flexible <m> /v,020289,FM,FM,FM,1/ (/NF X 10-030 Abschnitt/Nr 2/)

DEF: Ensemble constitué par un tube ou un tuyau souple équipé de deux pièces d'extrémité.

KON: Quelque soit sa nature (métallique ou non), le tube ou le tuyau doit présenter une souplesse suffisante pour que ces pièces d'extrémité puissent être couplées à des pièces de raccordement non nécessairement alignées sans subir pour autant des contraintes préjudiciables à leur emploi.

DOK: flexible, souple; extrémité;

- tuyauterie flexible <f> /v,080289,FM,FM,FM,1/ (/NF E 29-820

Abschnitt/Nr 3.1/)

KON: Flexible n'étant pas (dans ce cas) un substantif, il est d'usage dans la profession d'utiliser le terme 'tuyauterie flexible' en lieu et place de 'flexible' substantif.

- tuyau souple <m> /v,020289,FM,FM,FM,1/ (/NF X 10-030 Abschnitt/Nr 2/)

*OB tuyau 01

DE Benennung	Maus f. sub

Definition Ein 1982 erstmals angebotenes Zeige- und Eingabegerät, welches zur Steuerung des Mauszeigers, zum Auswählen von Befehlen und Schaltflächen, zum markieren von Texten und zum Malen dient. Die Maus wird durch das Bewegen auf einer ebenen Fläche und durch das Drücken von Tasten bedient.

Anmerkung Man kann Mäuse nach Art der Schnittstelle (USB, PS2, seriell), nach Art der Datenübertragung (Kabel, kabellos) und nach Funktionsprinzip (Rollkugel, optisch) unterscheiden.

Fachgebiet: **Billard**Lenoch-Code: **#SP: 6**Autor: **Isabell Otterbein** **Deutsch****Amerikanische Serie**

Genus: f.

Definition: Bei der amerikanischen Serie liegen die drei Bälle in der Nähe der **Bande** eng beieinander, der **Spielball** etwas hinter den beiden anzuspielenden Bällen ... Der Spielball muss nun ganz leicht in die beiden Zielbälle getrieben werden. Das gesamte Bild darf sich dabei kaum verschieben, alles spielt sich im Bereich von Millimetern ab.D-Quelle: [Kalb.2001](#), S. 50Kontext: Der Spieler, der die Bälle rasch zur 'Amerikanischen Serie' vereinigen kann, hat bereits die halbe **Partie** gewonnen.K-Quelle: [mitglied.lycos.de](#), 21.2.2004**Amerika**

Genus: f.

Benennungstyp: Kurzform

Kontext: Diese Amerika zu beherrschen ist der Traum jedes **Billard**spielers.K-Quelle: [Kalb.2001](#), S. 51**Bandenserie**

Genus: f.

Kontext: Es gibt ohne Beherrschung der Bandenserie kein starkes Spiel in der freien Partie.

K-Quelle: [Leffringhausen.1986](#), S. 107 **Englisch****nursery cannon break**

Wortklasse: sub

Regionalcode: BE

Definition: A repetitive sequence of dose **cannons** in which all three **balls** are kept close to the **cushion** and moved forward with each **stroke**.D-Quelle: [www.snookergames.co.uk/definitions](#), 24.2.2004

Kontext: It is a position which, as a rule, spoils the nursery cannon break, even if handled by the very best players.

K-Quelle: [www.eaba.co.uk/learners](#), 6.3.2004**nursery cannon**

Wortklasse: sub

Benennungstyp: Kurzform

Regionalcode: BE

Kontext: Walter Lindrum's highest **break** was made in the championship in 1932, his break was 4,137, the scoring method that accounted for most of these points was the nursery cannon.K-Quelle: [www.cuesnviews.co.uk](#), 29.3.2004**rail nurse**

Wortklasse: sub

Regionalcode: AE

Kontext: With the use of the rail nurse, a player can run many points.

Layouts

Auf dieser Seite können Sie das Layout auswählen, das Sie zum Anzeigen der Einträge in einer Termbank verwenden möchten. Wählen Sie die Termbank in der Dropdown-Liste **Termbank auswählen** aus. Wählen Sie im Feld **Layouts** das gewünschte Layout für diese Termbank aus.

Der Spalte **Eigentum von** können Sie entnehmen, wer welches Layout besitzt und dafür verantwortlich ist. Eigentümer kann das System, der derzeit angemeldete Benutzer oder eine Rolle sein, der der derzeit angemeldete Benutzer angehört.

Termbank auswählen: Billard

Layouts

Aktuell	Layoutname	Eigentum von	Beschreibung
<input checked="" type="radio"/>	Flags layout	System	Displays all fields except history fields. Each index field is represented by the flag of the index locale.
<input type="radio"/>	Full layout	System	Displays all fields including history fields.
<input type="radio"/>	Languages only	System	Displays concept level descriptive fields, i.e. all indexes and their terms. Each index field is represented by the flag of the index locale.
<input type="radio"/>	MultiTerm Classic	System	Displays the entry in a similar way to the default MultiTerm 5 layout.
<input type="radio"/>	Source/Target	System	Displays the source and target index fields and terms and their descriptive fields. Each index field is represented by the flag of the index locale.

Terminology working methods I

- **ad hoc terminology work**
solving a current terminological problem
(research for unknown terms, equivalents, synonyms)
- **text-oriented terminology work**
preparatory terminology research for a given text
(solve all terminological problems before you translate)
- **domain-oriented terminology work**
terminology research for all concepts of a given
subject field
(elaborate a complete terminology with concept relations)

Terminology working methods II

- **descriptive terminology work**
determine and describe the (current) usage of concepts, terms and definitions
(typical for freelance translators, interpreters, techwriters)
- **prescriptive (normative) terminology work**
lay down and define concepts, terms and equivalents, classify them as preferred, admitted and deprecated
(typical for standards bodies, but also for companies etc.)

Terminology working methods

Factors that influence terminology work:

- Objectives and user groups of terminology work
 - Amount of concepts and languages to be elaborated
 - Structure and information fields of termbase
 - available persons involved
 - intended time frame
 - available and accessible information / documentation
 - existing technical infrastructure
- ⇒ economic factors will often lead to compromises that do not follow the basic and established principles !

Terminology projects

- Planning and calculating the project
- Getting into the subject field (literature, experts)
- Limiting and structuring the subject field
- Accessing and analyzing the documentation material
- Searching for existing terminology resources
- Collecting terms; creating a monolingual term list; defining of concepts to be elaborated and documented
- Collecting further information (terms in other languages, definitions, context examples etc.) ⇒

Terminology projects

- Processing the material; terminological analysis:
 - Checking of equivalences
 - Clarifying of synonyms, abbreviations etc.
 - (Specifying of preferred, admitted, deprecated terms)
 - Coining of new terms (if terms do not exist)
 - Documenting the terms (grammar, usage, etc.)
 - Selecting (writing) definitions; selecting context examples
 - If useful, selecting graphical representations, figures etc.
 - Writing notes for (problems with) synonymy, equivalence, usage
- (Creating concept systems and concept relations)
- Quality control (by experts) and final check
- Making terminology available for user groups

Terminology projects in companies

1. Raise awareness (decision makers, terminology creators+users)
2. Train the people involved in terminology work
3. Analyze the workflow and specify the processes
4. Analyze existing terminology collections and relevant textual material (if possible, use term extraction tools)
5. Specify the basic terminology (domain- and company-specific)
6. Design the terminology database (model, datCats etc.)
7. Analyze the tool market and select (develop, adjust) the appropriate terminology management software
8. Enter a test set of terminological entries and evaluate the processes, the termbase design and the tool
9. Adjust and use

Term-related issues

Terms should be entered in canonical form:

- normally in lowercase (but: *Drucker, Microsoft*)
- nouns normally in singular (pl: *trousers, Leute*)
- verbs normally in infinite form
- multi-word terms in spoken/written order
- nouns not with articles (*der, le*)
- verbs not with infinite particles (*to, à, zu*)
- spelled correctly

Term-related issues

If you have to create new terms (e.g. for new concepts), follow the principles of term formation

- **Transparency (torque wrench vs. monkey wrench)**
- **Consistency (nylon, orlon, dracon, ... -on)**
- **Appropriateness (nuclear energy vs. atomic energy)**
- **Linguistic economy (term bank vs. terminological data bank)**
- **Derivability (herb vs. medicinal plant)**
- **Linguistic correctness**
- **Preference for native language**
- **Uniqueness (don't create homonyms in one domain !)**

Definition-related issues

- **Try to provide just one good definition (see 704)**
(Multiple definitions can be confusing)
- **Try to find and enter existing definitions**
(with the source); **shortenings and extensions**
are sometimes necessary and helpful
- **Definitions should be as short as possible and as long as necessary**
- **Stating a synonym is not a definition!**
e.g. diaphragm spring = Belleville spring

Definition-related issues

- **Use terms for referenced concepts and characteristics consistently**
- **If the term is mentioned in the definition, try to use it in singular form**
- **Definitions do not exist for ever: concepts are changing; therefore check and update**
- **In database: maintain only one definition in one field / data category**

Definition-related issues

If you have to write your own definition:

- **state what kind of thing your concept represents (usually the broader concept) and mention what differentiates your concept from other closely related concepts**
- **let a domain expert check the definition**
- **do not use finite verbs like *is, refers to, is called***
- **do not mention the term in the definition (DE !)**
- **punctuation, capitalization, article usage: provide styleguides**

Definition-related issues

- **Examples:**

Term: *terminography*

Term: *terminology management*

Def: *part of terminology work concerned with the recording and presentation of terminological data*

Ref: *ISO 1087-1:2000*

Note: *Terminological data may be presented in the form of term banks, glossaries, thesauri or other publications.*

Context-related issues

- **The Context field contains a text chunk, which includes the term in question**
- **Context contains a manageable amount of textual information (e.g. a sentence)**
- **The context shows that and how the term is really used (linguistic and situational environment)**
- **Therefore, find and enter existing contexts (with source)**

Context-related issues

Different types of context can be differentiated:

- **defining context** (“incomplete definition with term”)
- **explanatory context** (“bad explanation with term”)
- **associative context** (associates concept to domain)
- **linguistic context** (function of term in discourse)

Documentation issues

- Sources of text-related information have to be appropriately cited (e.g. **definitions, contexts, notes, graphics, terms**) if quoted
- Sources of terms only if required (e.g. if no context can be found for a synonym)
- Use Source-IDs (Codes) that refer to full bibliographical information of the source (to be efficient and consistent in coding)
- For web resources, use URL and date
- Follow advises in literature for evaluating the quality of the source (esp. for web sources)

Maintenance issues

- **Terminological data collections, whose **content** is not maintained, become outdated, obsolete, incorrect, incomplete, and will no longer be used.**
- **Besides the maintenance of the content, a **formal** maintenance and checking of the data is necessary (called data validation)**
- ****Data validation:** process used to determine whether data are formally accurate, consistent, correct, complete and plausible (ISO 1087-2:2000)**

Maintenance issues

Data validation procedures:

- **double-entry check (real homonyms vs. double entries)**
- **consistency check (e.g. cross-references)**
- **spelling check**
- **completeness check (mandatory information)**
- **format check (e.g. date format)**
- **plausibility check (is content conforming to spec.)**

- **Can be done during data input or periodically by specific validation routines !**

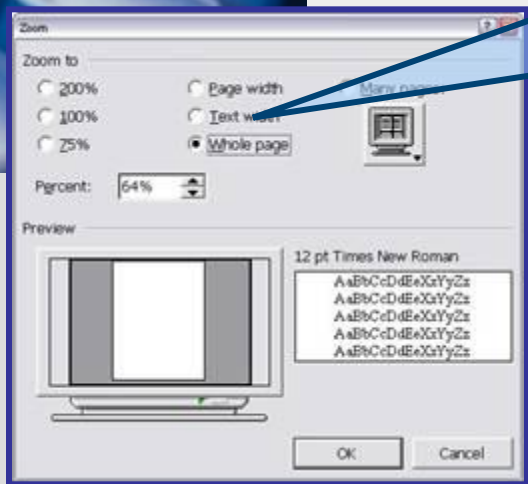

Standardization of terminology

- Standardized terminologies shall reflect a coherent terminological system, shall be precise and lead to increased clarity in communication.
- One primary function of a standardized terminology shall be to indicate preferred, admitted and deprecated terms.
- Standardizing terminology is a task of technical committees in **standards organizations**, but also in **companies, organizations, professional associations etc.**

Standardizing terminology

- terminology should be defined and used consistently:
 - within a document
 - within a product
 - within a company
- **only one term for a given concept (no synonyms!)**
- **only one concept behind a given term (no homonyms!)**

Standardizing terminology

Matthias Heyn, SDL,
tekem-Jahrestagung 2005

Standardizing terminology

Begriffsnummer: 127

Begriffsklärung:

Benennung: Leichtmetallscheibenrad

Synonyme: Leichtmetallrad
Alufelge
Aluminiumscheibenrad
Aluminium-Scheibenrad
Leichtmetall-Scheibenrad
Scheibenrad Aluminium

Terminology / information workflow

- Terminology workflow: the translation viewpoint
 - Documents to be translated:
 - manuals, handbook, guidelines, tutorials
 - technical specifications
 - scientific books, articles
 - patents, standards
 - contracts, offers, tenders
 - software user interfaces
 - etc.
 - less often fiction and general language texts

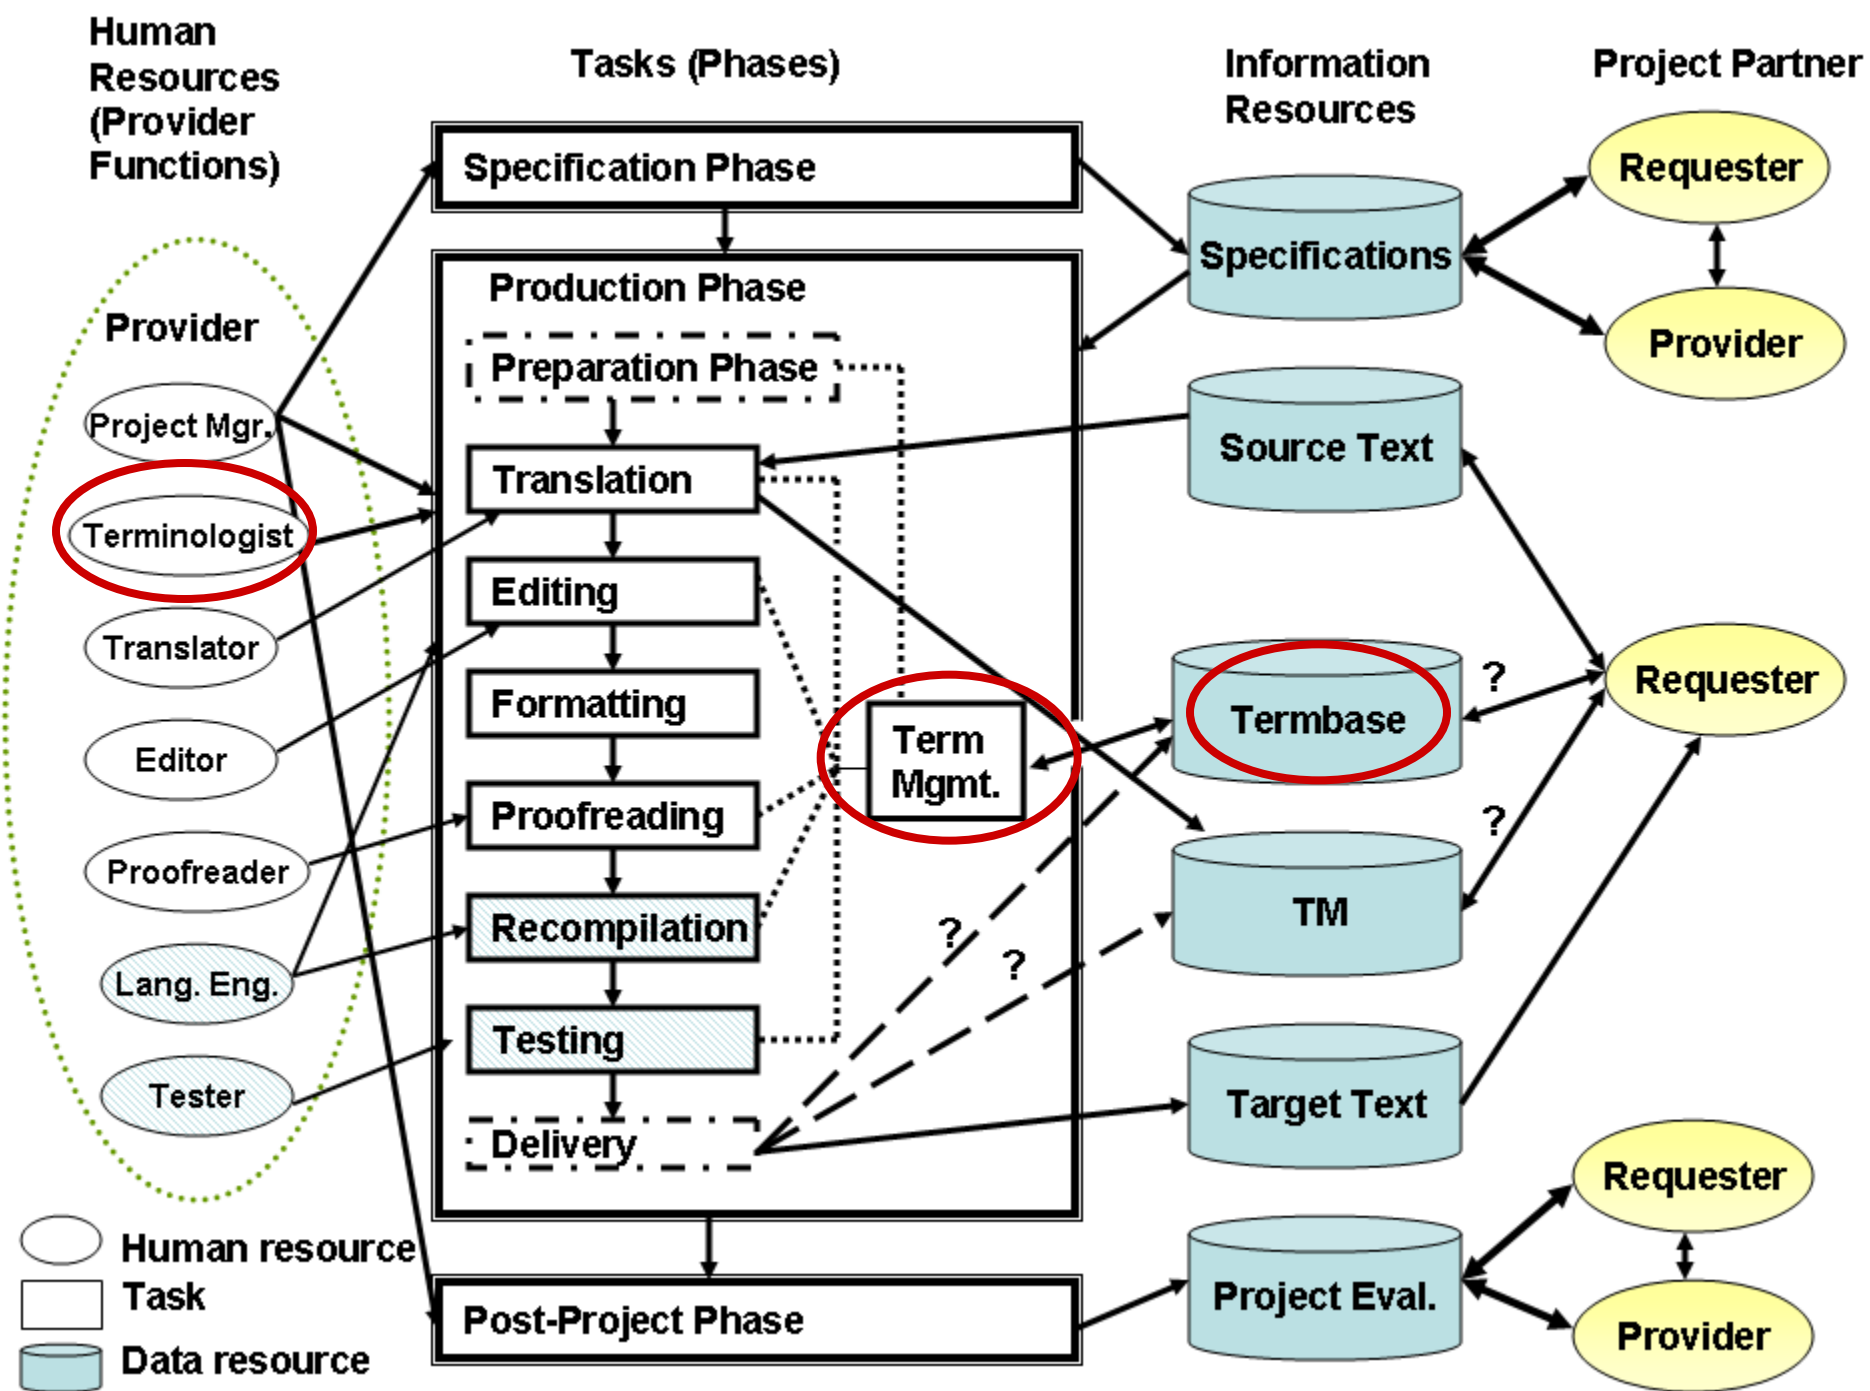

⇒ **high frequency of “technical” terms !**

Information development workflow

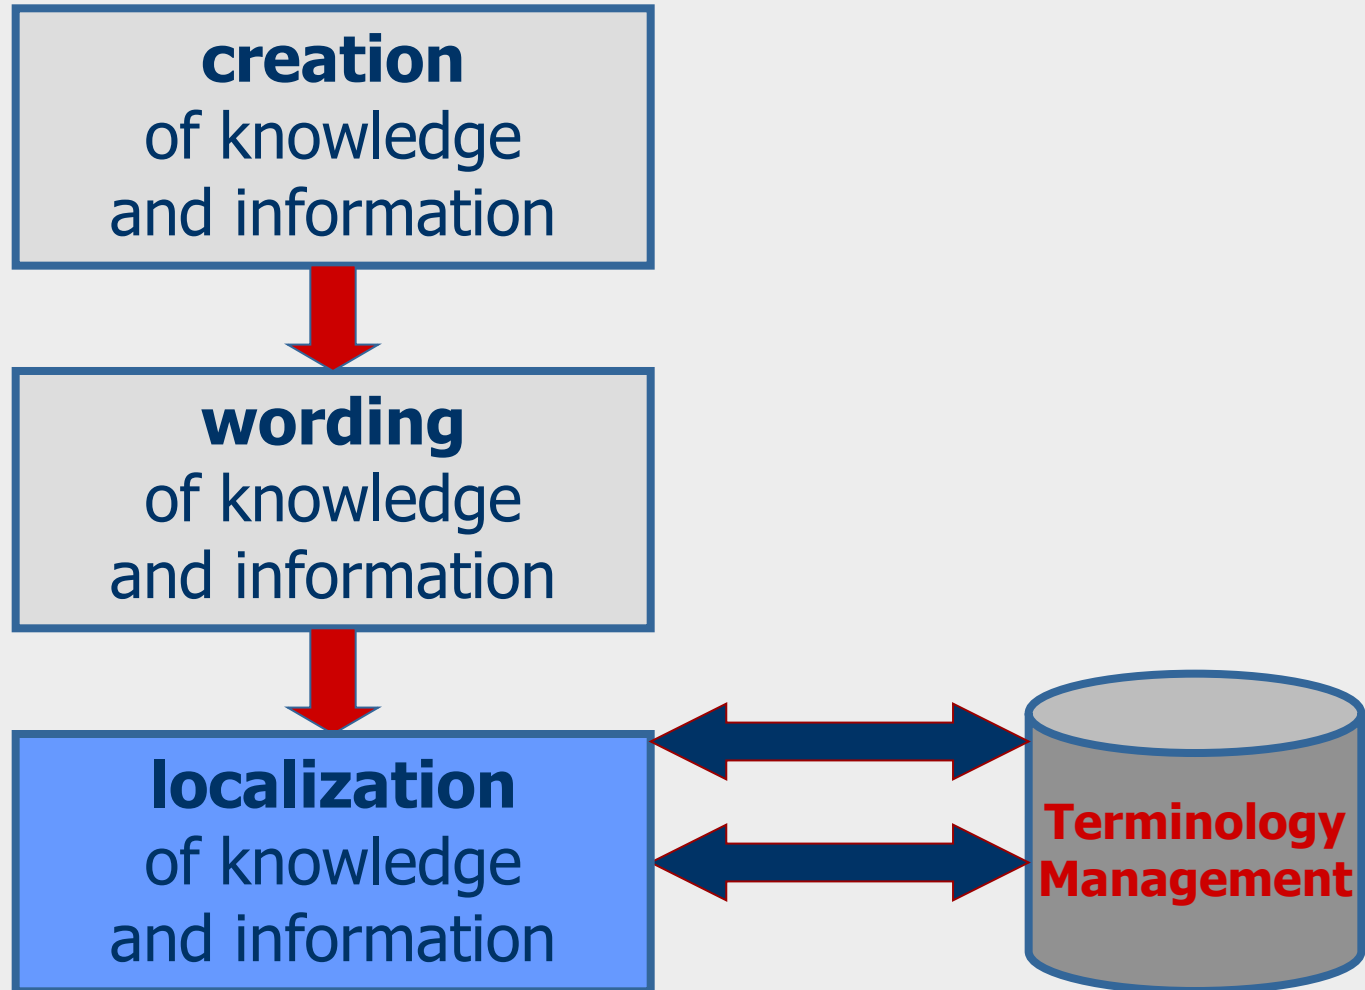

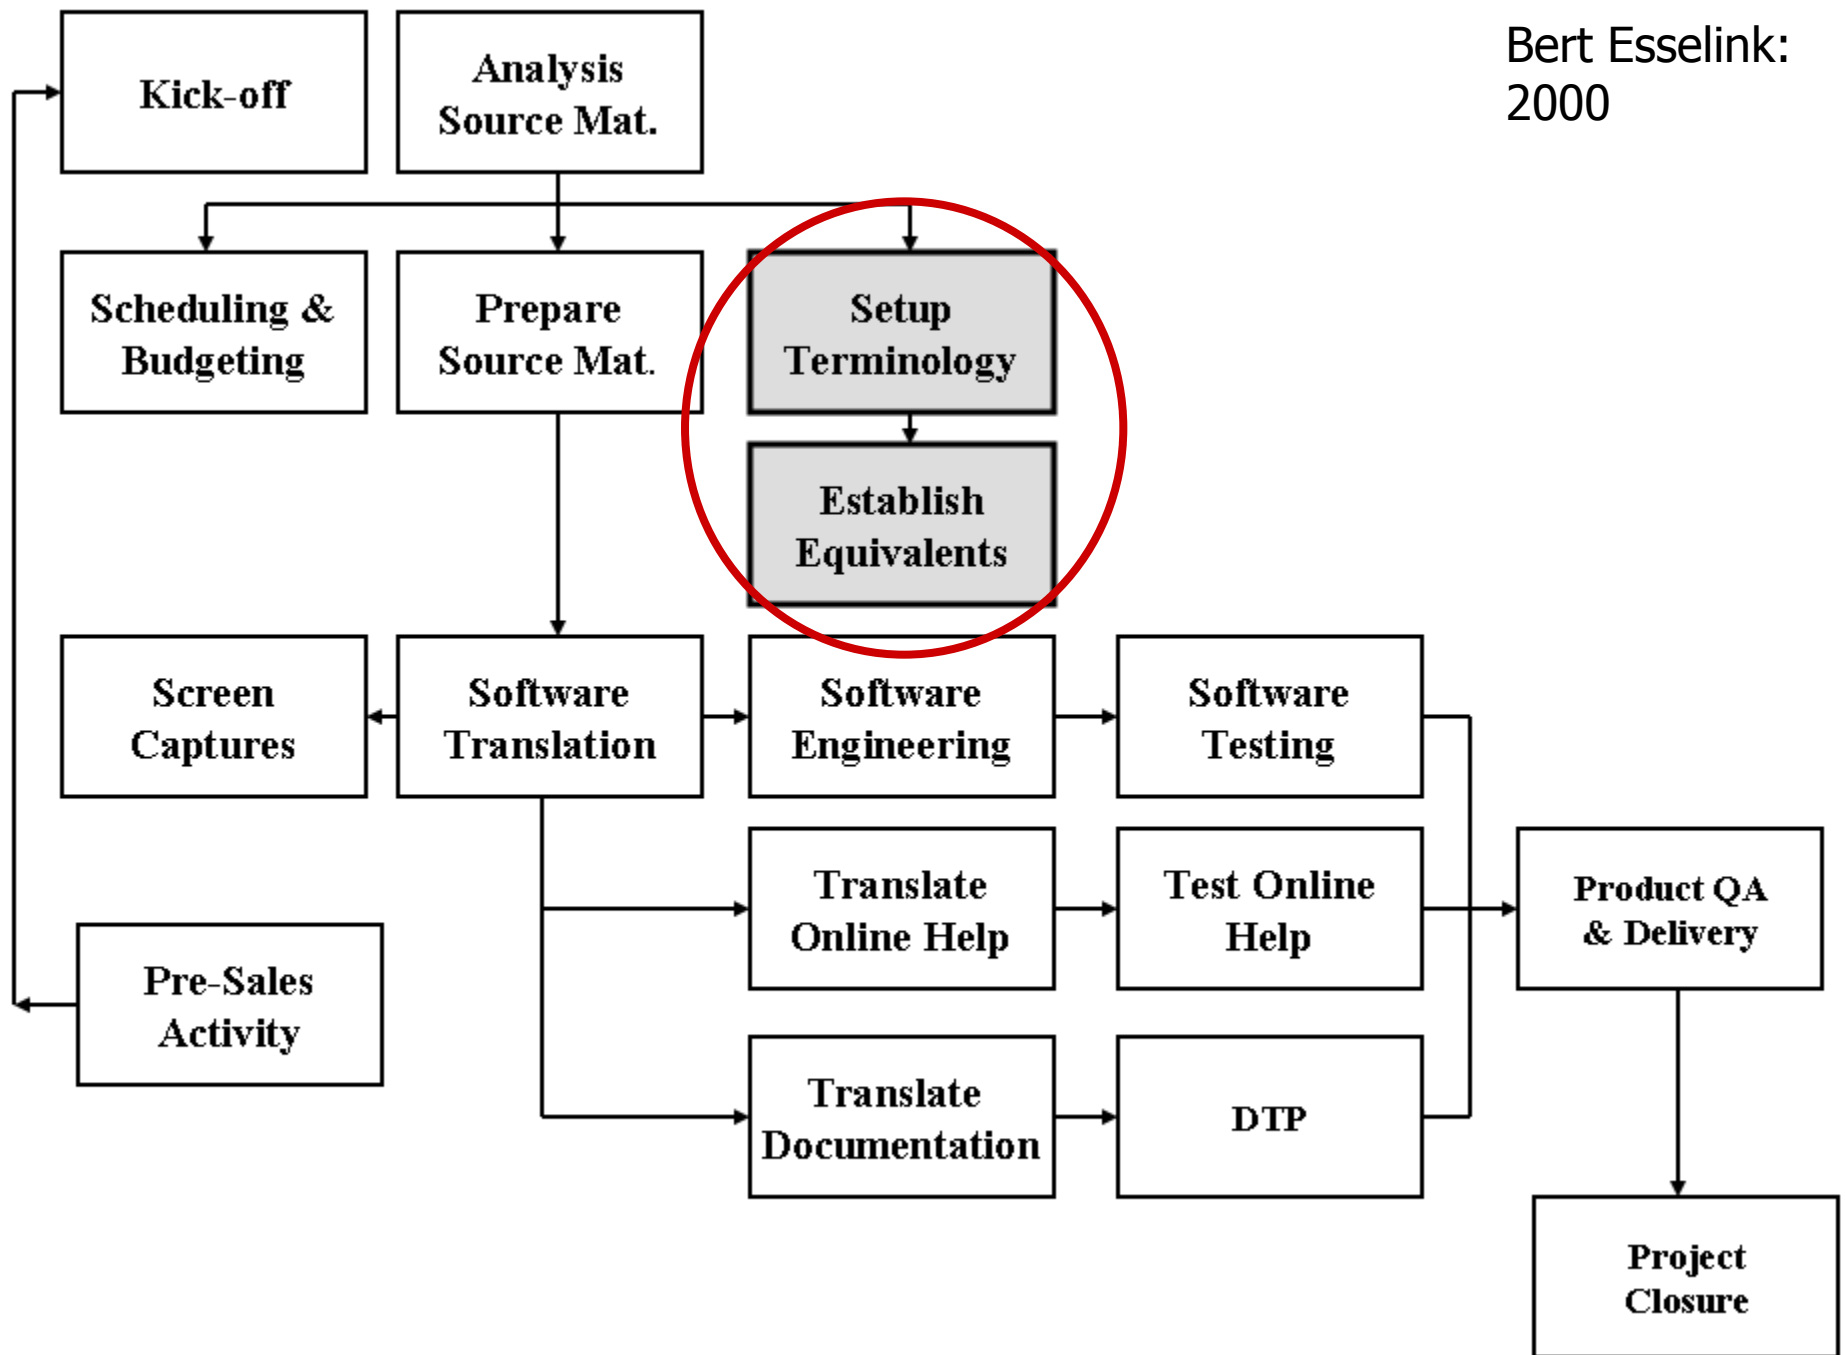

Standard Guide for
Quality Assurance,
ASTM F2575-06

Information development workflow

Bert Esselink:
2000

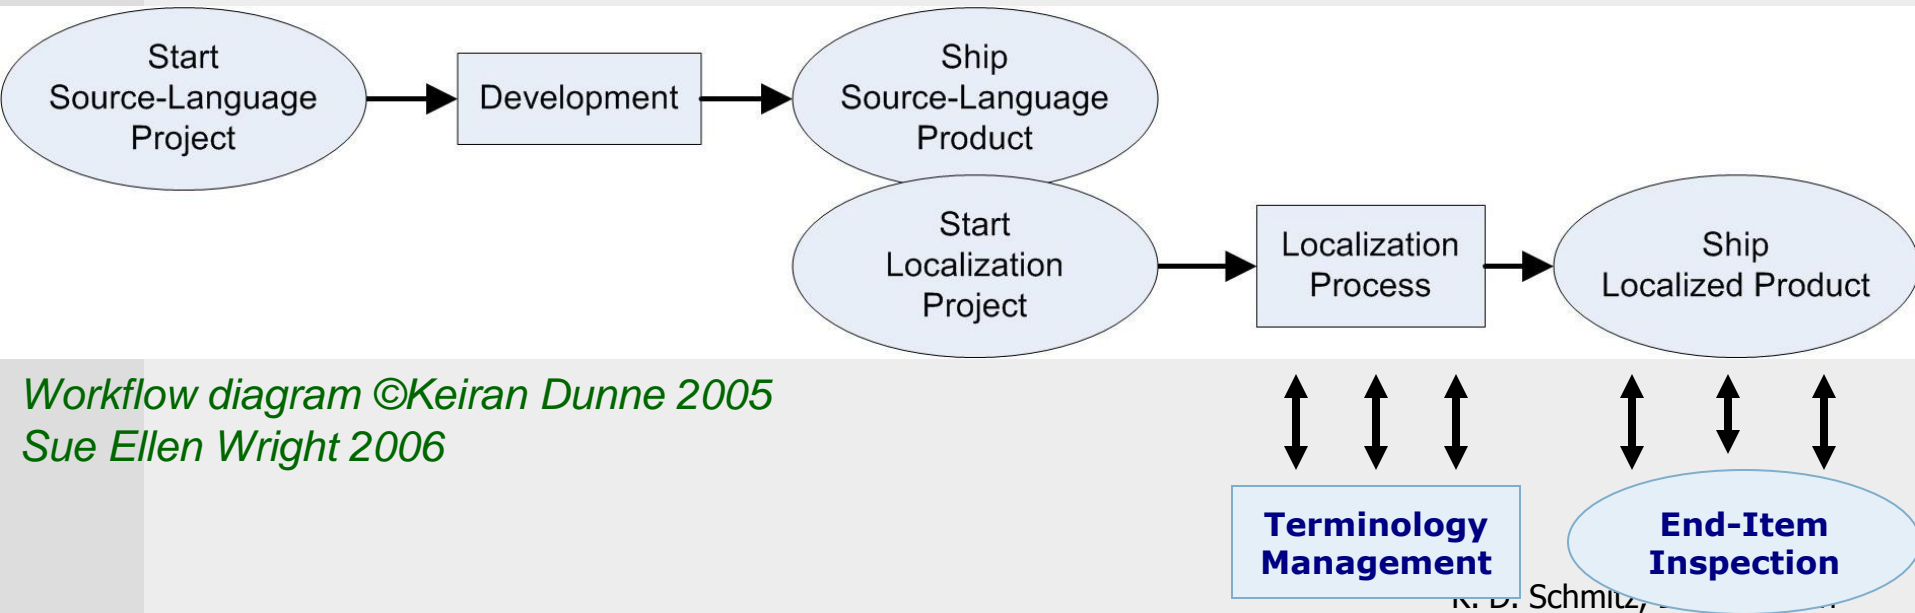

Terminology for software localization

- Especially for software localization, terminology has to be defined (and created) **before** the localization process starts.
- And: very often the localization starts **before** the “source text” is finalized, in order to assist a simultaneously shipping of the product in several markets at the same time.

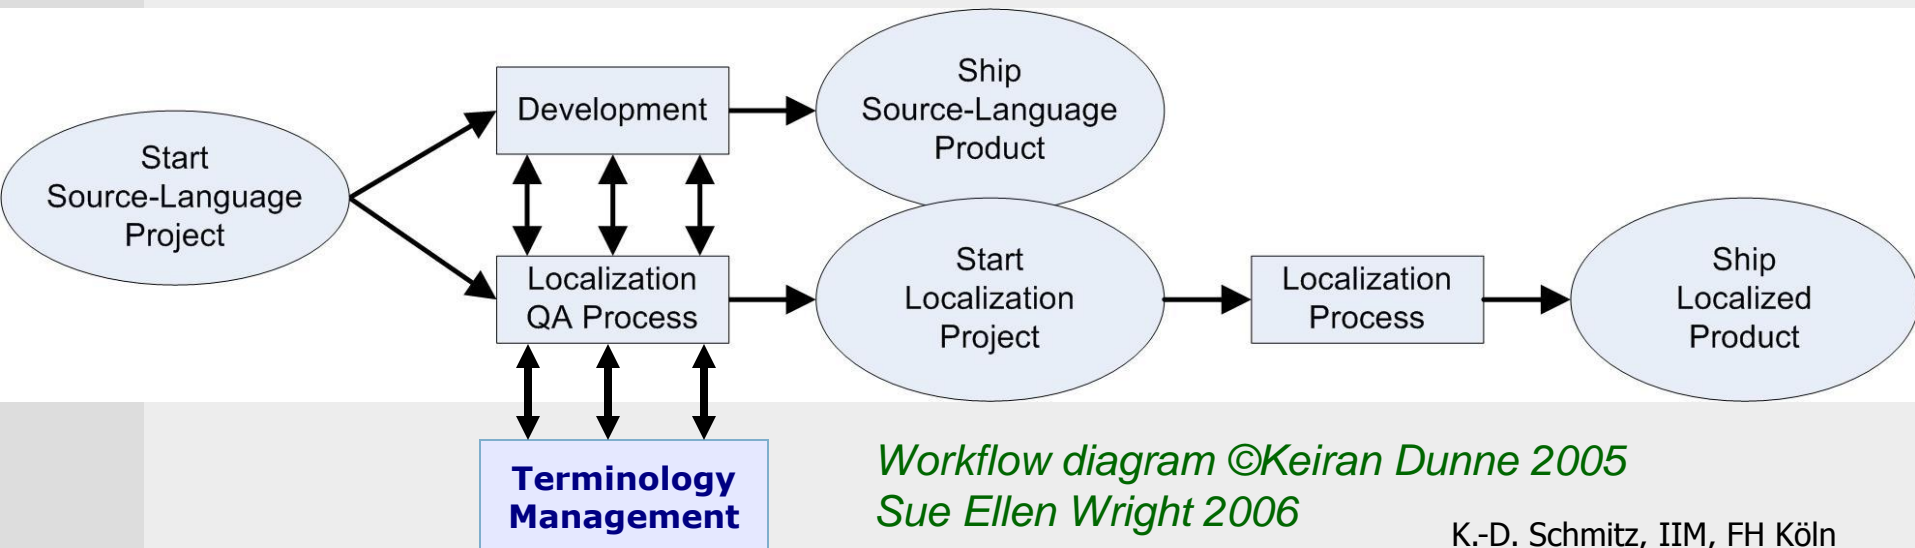

Terminology for software localization

- Traditional process:
 - Ad hoc terminology management
 - Reactive project-specific terminology management
 - No influence on document production, i18n

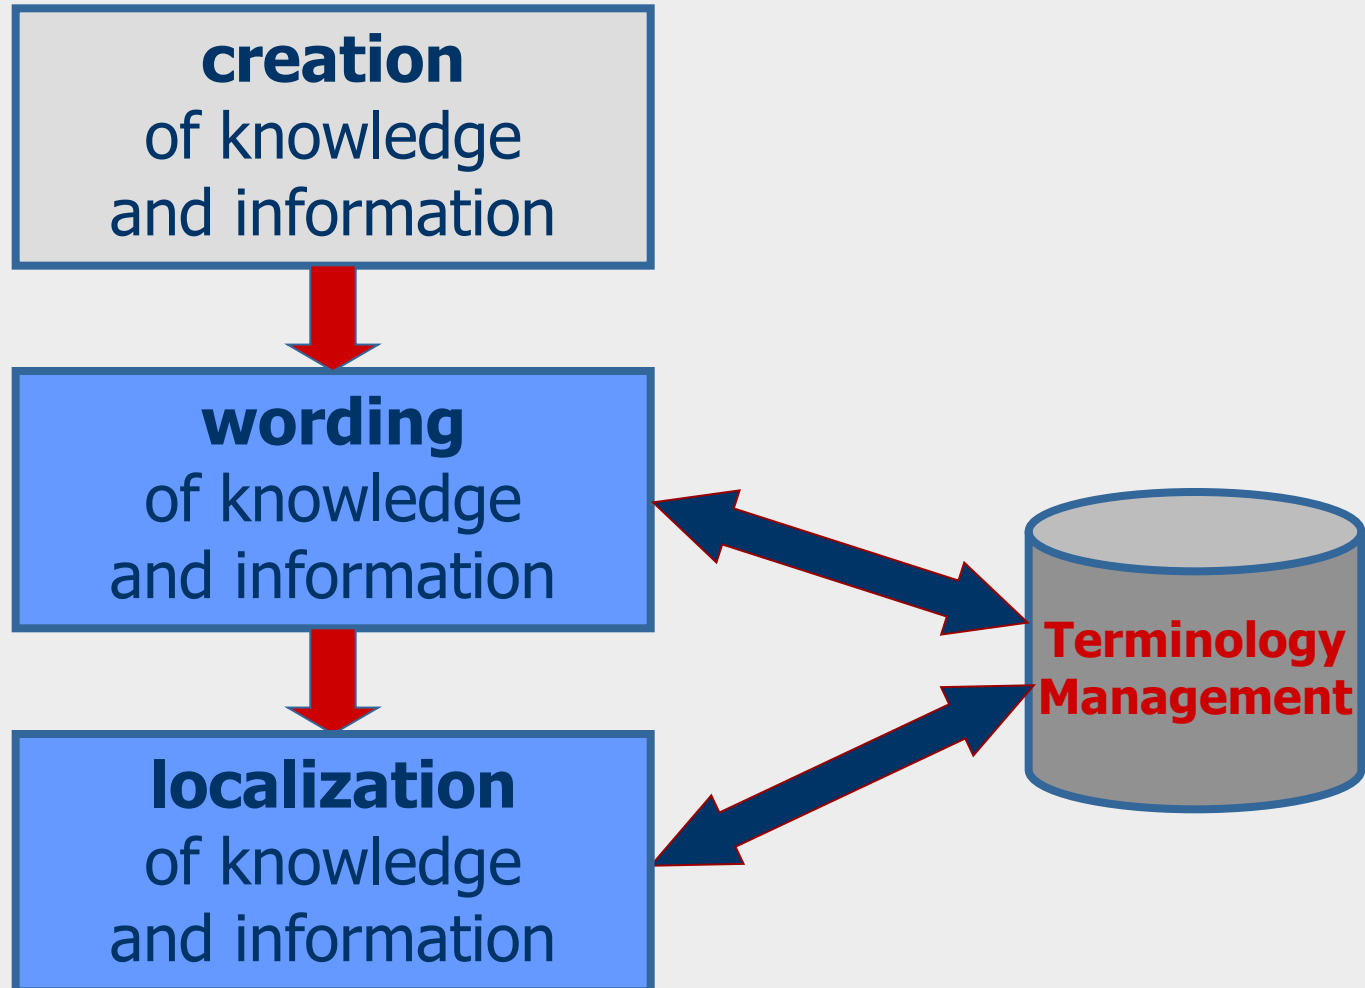

Terminology for software localization

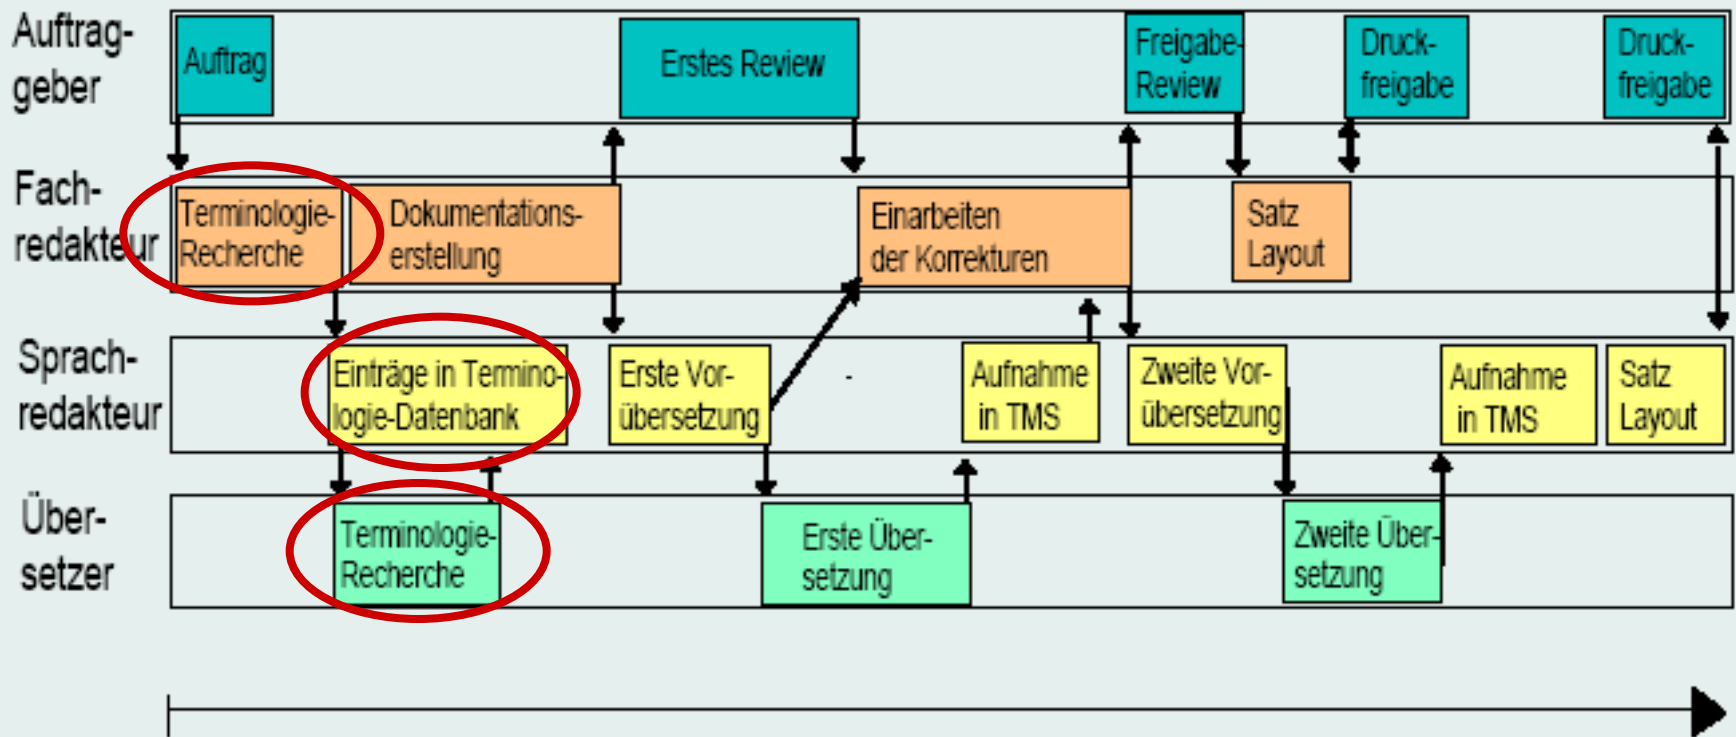

- Terminology management as a function of QA (Quality Assurance) management
- Terminology management and QA upstreamed to planning stage
- **Proactive terminology management**

Information development workflow

Typische Prozess-Schritte bei der mehrsprachigen Dokumentationserstellung heute

Susanne Murawski, 2005

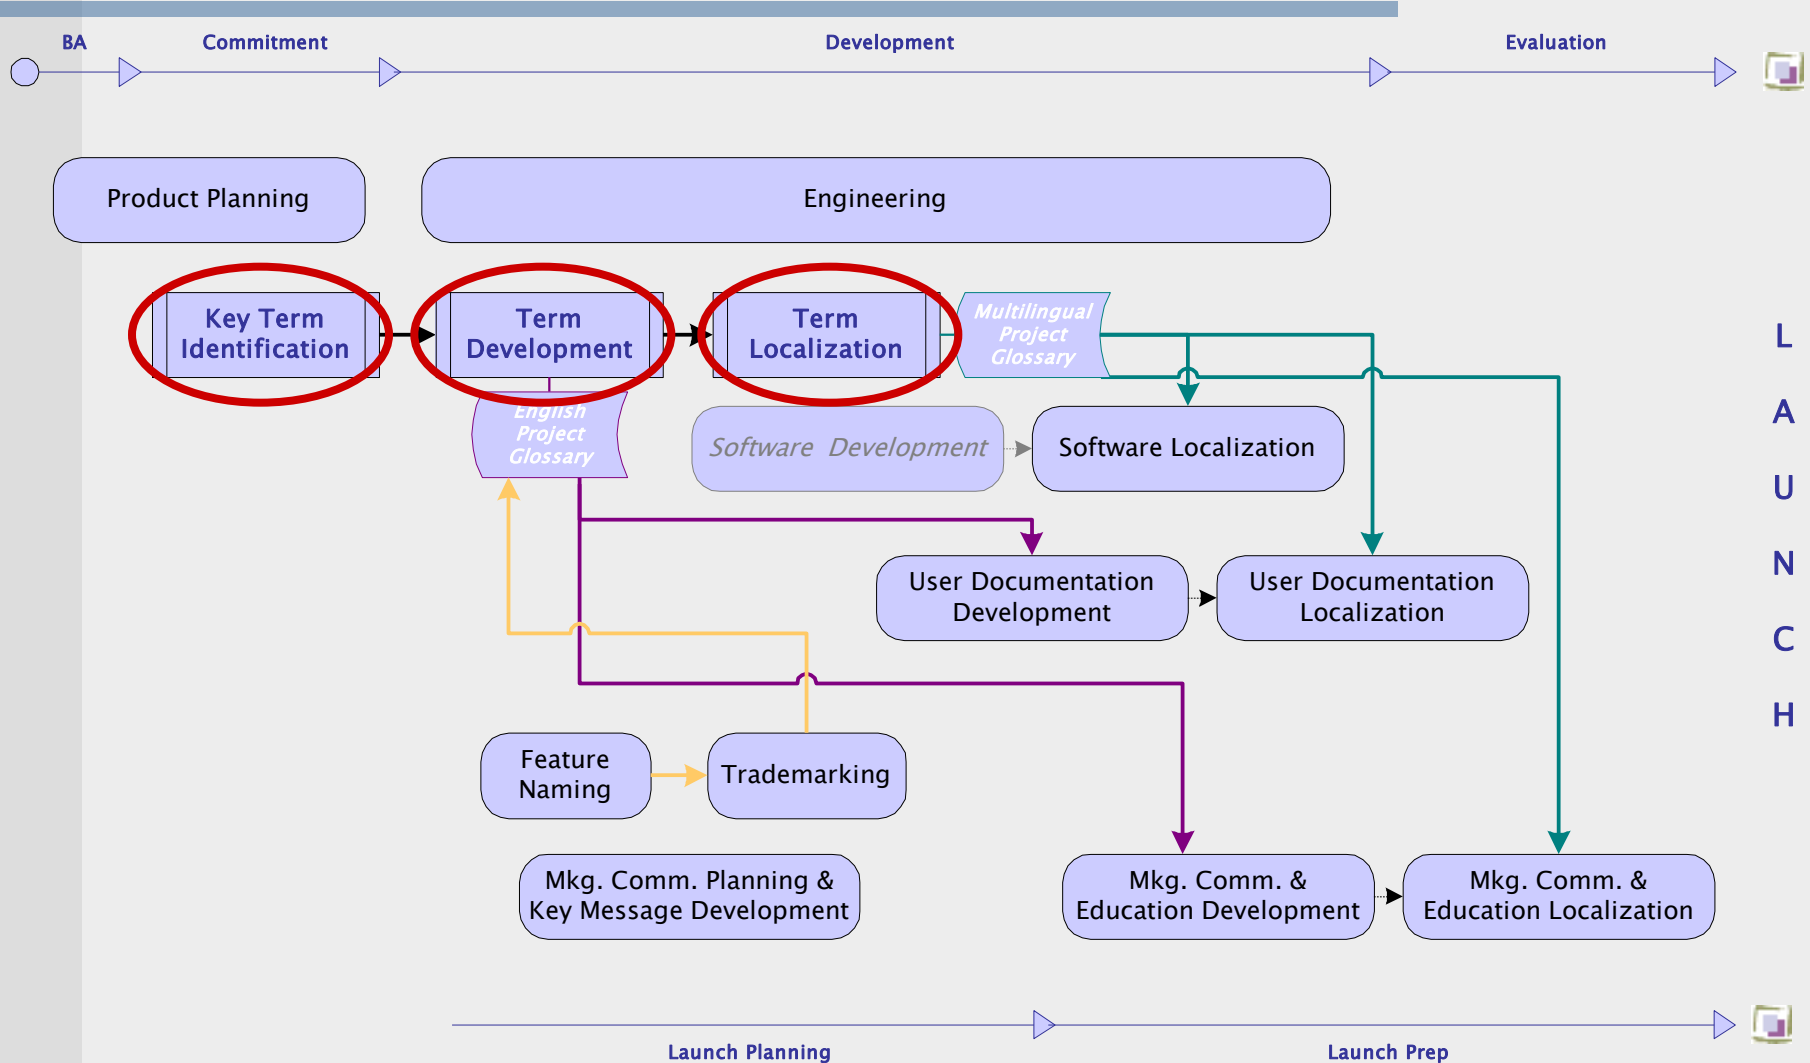

SDI-Seminar „Übersetzungsworkflow“

cognitas.

Terminology for the source text

- The selection of appropriate terminology with well defined concepts as well as the correct and consistent usage of terms are pre-conditions for successful information development
- Diligent terminology (management) does not only help end-users but also documentation and localization experts
(less errors in the source text, less questions at the author)
- **Terminology management is necessary for the whole information creation and localization process !**

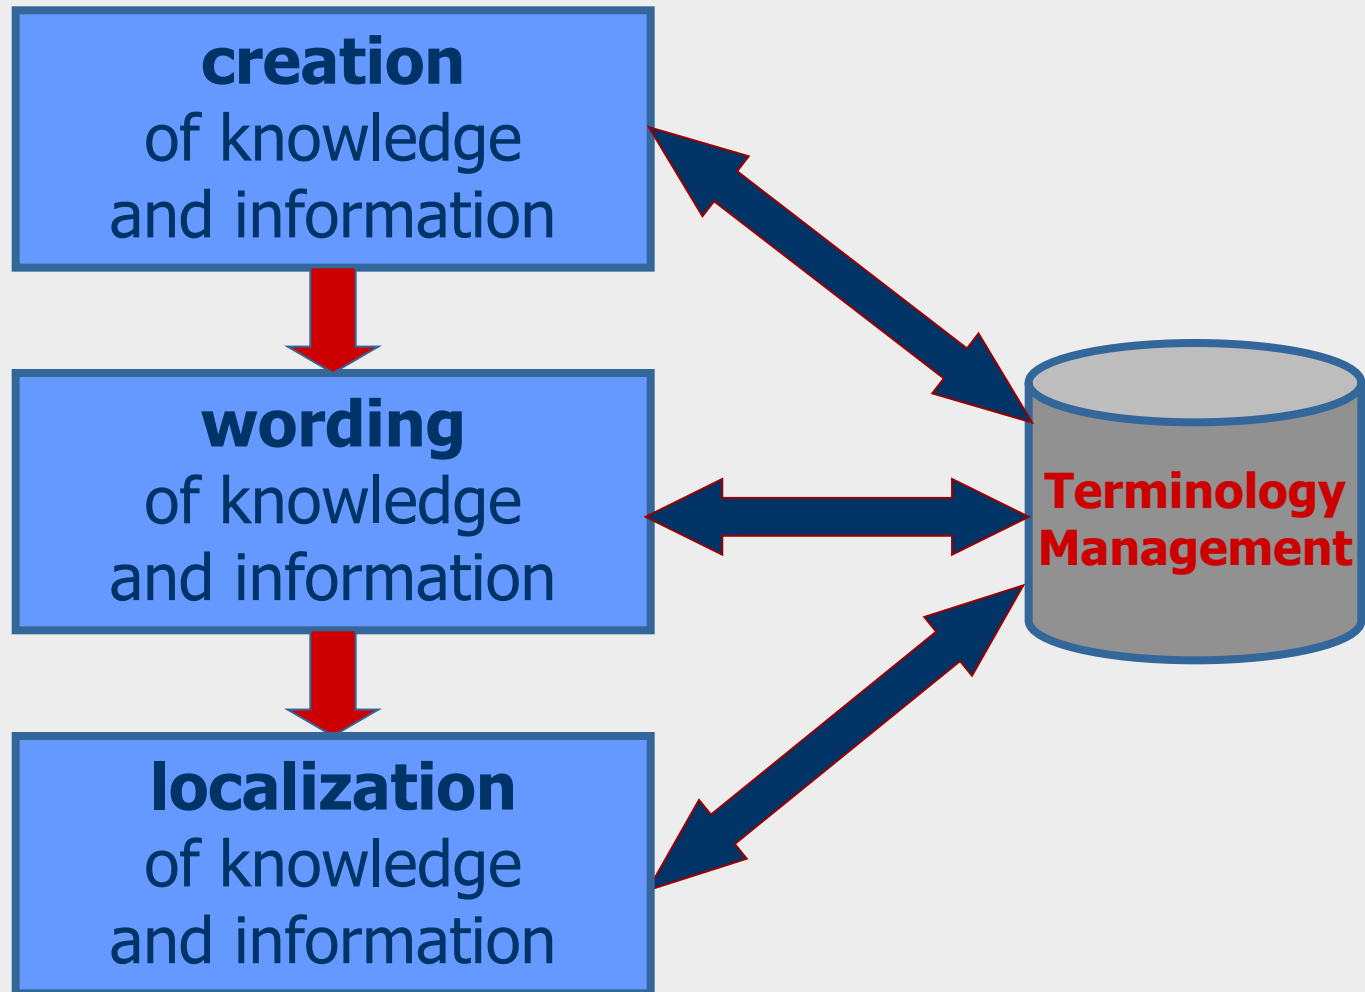

Medtronic Terminology Workflow

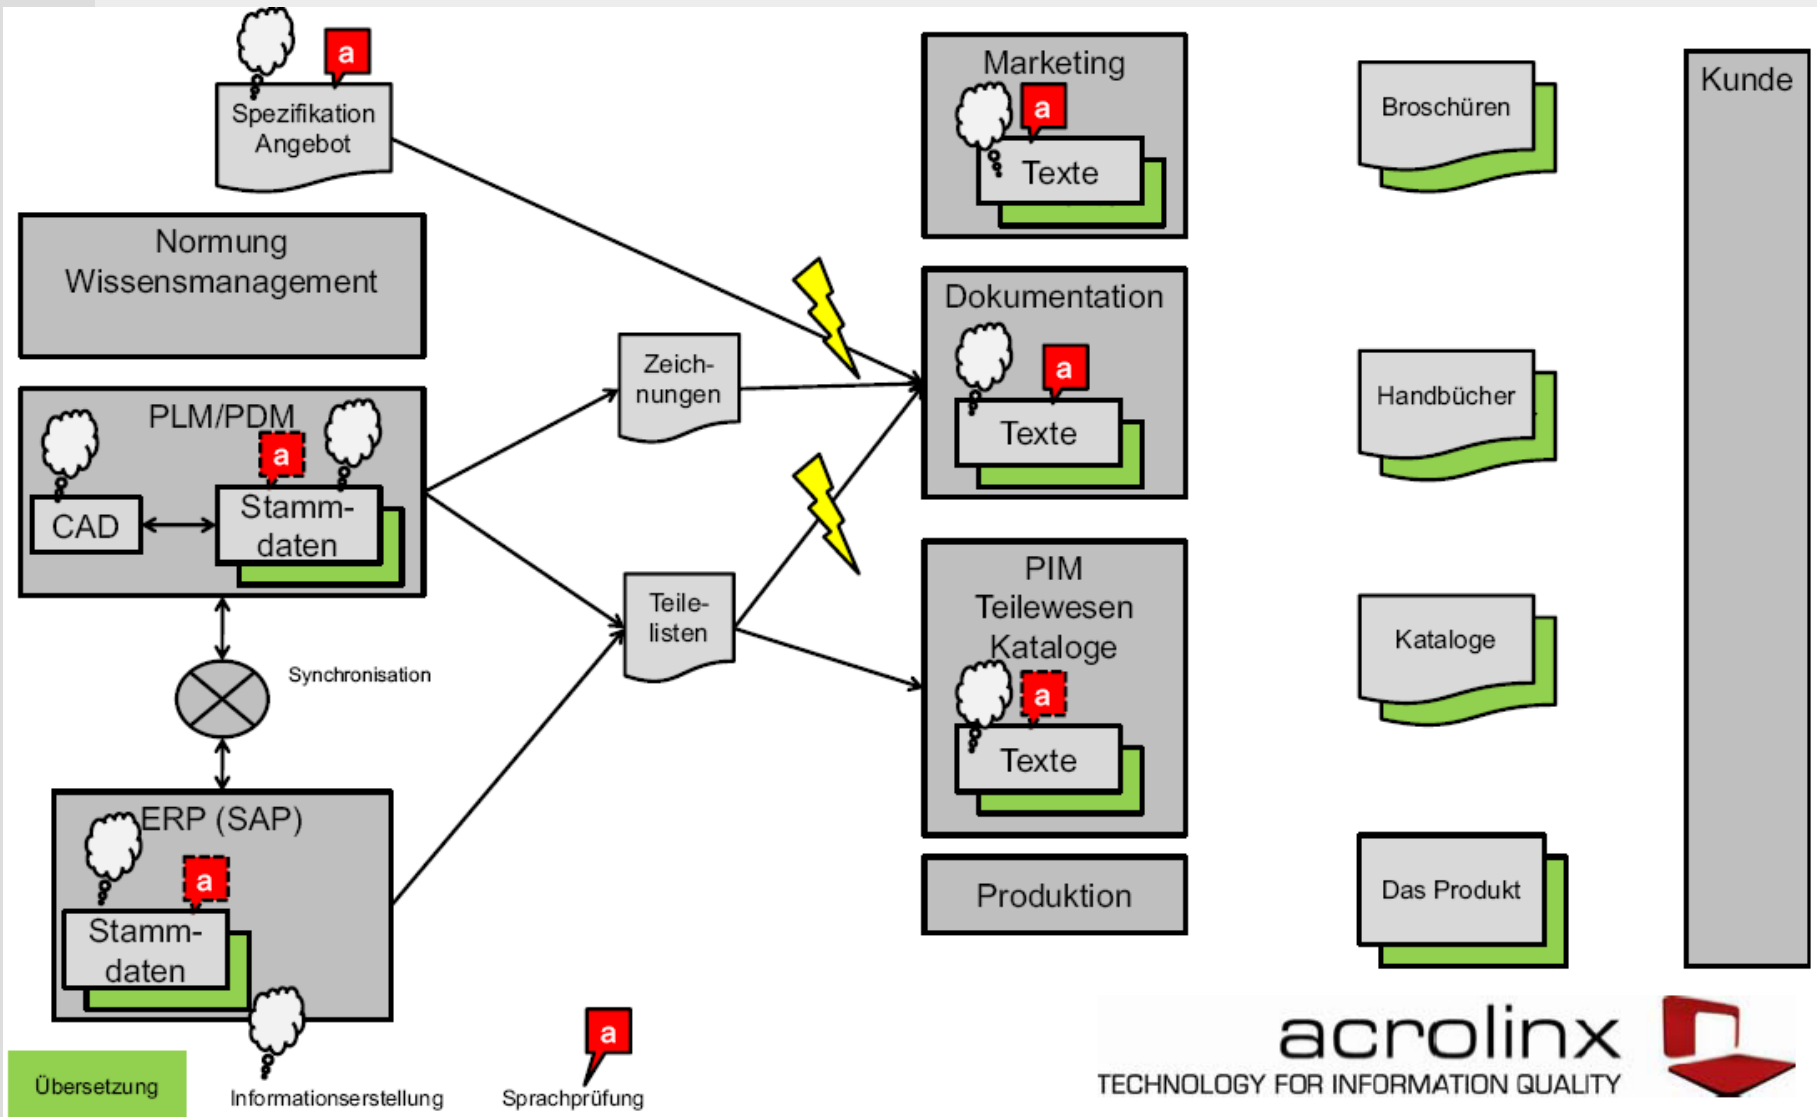

One World Publishing (OWP) Gesamtprozess und 7 mögliche Phasen der Terminologiepflege und -kontrolle

Information development workflow

Information development workflow

Conclusion I

- High-quality terminology work is time-consuming and therefore expensive.
- The more persons or applications make use of the terminology, the better the benefit.
- The “earlier” terminology work starts, the more efficient will be the process of software development and software localization.
product liability, user satisfaction, time to market, etc.

Conclusion II

- terminology solutions in enterprises, taking into consideration all aspects of terminology theory and terminology management,
 - reduces efforts and costs for translation and localization
 - brings products faster to the market
 - supports user friendliness and user acceptance of products and documentation, also in the local market
 - (supports non-native speakers)
