Dear Reader,

This is going to be a very "hot" summer 2007 with TermNet. As you already probably know, TermNet is organizing two Summer Schools this year 2007. The topics are completely different (Terminology vs. Diversity) but, however, there is something that they have in common: professionals from all around the world take the chance to meet each other and learn from the experience of their colleagues. A summer full of new ideas, projects, discussions, challenges and contacts...

And the registration for our Summer Schools has already begun!

The International Terminology Summer School 2007 (TSS 2007) will take place from 16-20 July in Cologne; one week practice-oriented training with some of the most renowned experts: Klaus-Dirk Schmitz, Sue Ellen Wright, Heribert Picht, Gerhard Budin and Frieda Steurs. In this issue you can also find an interview to the organizers Prof. Dr. Klaus-Dirk Schmitz and Anja Drame

And the First International Diversity Summer School 2007 at the University of Vienna is now open. This also 5-day Summer School will take place from 9-13 July 2007 in Vienna. With topics like Diversity in the Context, Diverse Cultures – Diverse Languages, Standards and Quality Assurance of Diversity Management, Diverse Cities,Enterprises and Projects.

For more information about the programme, speakers and fees, please do not hesitate to visit our website. For Terminology Summer School: http://www.termnet.info/english/events/tss2007.php

Or contact us: Anja Drame adrame@termnet.org

Kind regards,

The TermNet Editorial Team
Interview - International Terminology Summer School 2007

Like every year, there will be an International Terminology Summer School in 2007. After the University of Vienna in 2006, this year's TSS will be hosted by the Institute for Information Management at the Cologne University of Applied Sciences, Germany. We talked to the organizers Prof. Dr. Klaus-Dirk Schmitz and Anja Drame.

Question:
Prof. Schmitz, your institute will host TSS for the second time this year. As trainer, however, you belong to the TSS team for a much longer period. In your opinion, how has the event changed over time?

Schmitz:
In the course of years the idea of TSS has changed quite drastically indeed. It all began as an basics course. Later there were attempts to run Summer Schools or Summer Academies, as we called it, aiming at particular target groups*. For instance we have developed and realized train-the-trainer seminars or one focused on terminology applications in localization. But it has always shown that there is a huge demand for a basic introduction. We are now again tackling this demand in the first place. Back to Square 1, so to speak. Of course the content and tools for terminology work have changes as well since the first TSS nearly a quarter of a century ago. New fields like localization and semantic interoperability have joined the traditional ones like terminology standardization or translation. Our topics always cover the most recent developments in science and technology and problem fields.

Question:
The title of the event reads "Terminology Management: Theory, Practice and Applications". However, there are a multitude of training, workshops and conferences on the market, which are dealing with terminology. What makes TSS so special?

Schmitz:
It is true, there are many conferences. Usually these are focusing on very specific aspects only and consist of disconnected or even incoherent papers. Other that these, TSS covers the whole spectrum of knowledge, and skills that are needed to do good and sound terminology work. Moreover, with TSS we try to remain independent from single software providers. Most terminology seminars are a bit too tool-specific.

Drame:
There are a few university courses. But these are way too time-consuming and theoretic for most. Especially for those, who are already working and need this qualification for their job.

Schmitz:
True. Furthermore, not all universities offer adequate terminology training to students of related subjects. For this reason we offer 6 ECTS according to the European Credit Transfer System for participation. This is a special appeal for students (together with the huge discount).

Drame:
(laughs) And where else does one get world-class experts for the different terminology applications who take time during a whole week to help the most individual problems and tell you all you ever wanted to know about terminology work?

Schmitz:
The answer would be „yes“. Three times yes. We address students of universities without terminology curriculum. The ECTS are relevant for them. Scientists might be most interested in didactical questions, how to teach terminology work. Besides getting insight into terminology practice, that is. Practitioners will find authentic examples, real-life exercises and a comprehensive introduction into the field.

Question:
Which target group are you aiming at exactly then: Students, scientists or practitioners?

Schmitz:
The answer would be „yes“. Three times yes. We address students of universities without terminology curriculum. The ECTS are relevant for them. Scientists might be most interested in didactical questions, how to teach terminology work. Besides getting insight into terminology practice, that is. Practitioners will find authentic examples, real-life exercises and a comprehensive introduction into the field.

Question:
You must not forget to mention that TSS addresses all age groups and backgrounds. Diversity is really no foreign word for us.

Schmitz:
Heterogeneity is hard to avoid. We always had this kind of groups in the past. However, feedback we received always showed that this is not seen as a problem by the majority of participants. On the contrary, mutual benefiting from each other’s experiences is desired. TSS program also takes different kinds and levels of experience into account and offers the chance for discussion rounds, breakaway sessions and special foci.

Drame:
The participants at TSS do not only learn from what the trainers tell them during their lectures but from each other in the first place. The most important message we try to teach is „you are not alone out there“ and „take a step back and take another look at the broader picture and you’ll be surprised that other might have made almost similar experiences“. Learn to learn from each other. The rest is pure theory. A crash course like TSS is an incredibly efficient way to network within the community and beyond. Many friendships and new contacts stay alive long after the course. I can tell from personal experience.

Question:
One last question about costs for participating...?

Schmitz:
Costs range in the lower categories of what is usually charged for training. This is not in the least because we have non-commercial background and luckily can make use of university infrastructures. But we also have to be self-supporting. Even more so because we are proudly independent and impartial and do not want to become depending from commercial sponsors. We have to be able to carry all costs on the one hand and be affordable for all on the other hand. We are proud to have achieved this in the past years.

Drame:
But is a course for such a heterogeneous group achievable and reasonable at all?

Schmitz:
Heterogeneity is hard to avoid. We always had this kind of groups in the past. However, feedback we received always showed that this is not seen as a problem by the majority of participants. On the contrary, mutual benefiting from each other’s experiences is desired. TSS program also takes different kinds and levels of experience into account and offers the chance for discussion rounds, breakaway sessions and special foci.

Drame:
The participants at TSS do not only learn from what the trainers tell them during their lectures but from each other in the first place. Language Services Industry featured in TIME magazine

TIME magazine reporter Jeff Ressner featured the business of translation, both in government and the private sector, in the January 12, 2007, issue (full article: [http://www.time.com/time/magazine/article/0,9171,1576836-1,00.html](http://www.time.com/time/magazine/article/0,9171,1576836-1,00.html)). Citing Common Sense Advisory's estimate of the size of the language industry, he also turned to the firm's president and chief research officer, Don DePalma, for insight about what's driving the market for global communication and product localization.

Ubuntu

Ubuntu is a free, open source Linux-based operating system that starts with the breadth of Debian and adds regular releases (every six months), a clear focus on the user and usability (it should "Just Work", TM) and a commitment to security updates with 18 months of support for every release (and with 6.06 LTS you get 3 years on the desktop and 5 on the server!). Ubuntu ships with the latest GNOME release as well as a selection of server and desktop software that makes for a comfortable desktop experience off a single installation CD.

Ph.D Dissertation (Ohio University, 2005) deals with Information and Communication Technology as Tool for Socio-Economic and Political Development

The case study by Juliet E. Evusa examines the National Council of Churches of Kenya (NCC) Huruma Community Telecenter. This interesting study highlights among others the importance of diversity questions and local content production as crucial factors in this process.

The Vision 2020 plan envisions Malaysia as a developed country by 2020 with the establishment of a K (knowledge)-community. Special emphasis has been given to development of infrastructure and potential human capital by involving state, local governments as well as the private-public community. ICT plans for universal access, content development, affordability, lifelong learning have been started. RM 1098 million was allocated for ICT-related activities for bridging the Digital Divide with RM10 million for local content development in the 8th Malaysian plan.

Malaysia is a multiethnic society and the knowledge and digital divide is multidimensional in nature, this implies that great care has to be taken in the proper and fair implementation of the projects. A better system of data collection and a feedback mechanism needs to be in place for the same.

Commonwealth Connects Programme

The Commonwealth Connects Programme is helping to bridge the deepening Digital Divide across the 53 countries of the Commonwealth. In an attempt to mitigate this increasing digital fragmentation, a collaborative effort of the Commonwealth Secretariat, Commonwealth partner agencies and member countries has formed the Commonwealth Connects Programme. It is a multi-stakeholder partnership aimed at tapping available Commonwealth resources to fast track positive change. It is a unique initiative that enables the transfer of technology and expertise across the whole Commonwealth. The website features a project Marketplace as well as Expert Discussion Forum on issues such as local content creation, local languages for bridging the Digital Divide. Learn more about the programme: [http://www.commonwealthconnects.net/comcon/Default.aspx?tabid=69](http://www.commonwealthconnects.net/comcon/Default.aspx?tabid=69)
