

Information Society Standardization System of the European Standardization Committee (CEN/ISSS)

<http://www.cenorm.be/iss>

About CEN/ISSS Workshops

These offer the opportunity for direct participation in the international standardization process. They are ongoing working groups that are open to all interested parties, including vendors, service providers, regulators, users and consumer groups. CEN/ISSS Workshops aim to arrive at a European consensus on an issue that can be published as a CEN Workshop Agreement (CWA). These deliverables may take the form of best practice agreements, codes of conduct or pre-standards, with the formal backing of CEN, one of the three European Standardization Organisations. The breadth of ICT-related topics is vast, so the ISSS Workshop has been conceived in a manner that allows flexibility to ensure the environment of any particular Workshop satisfies the aims of the parties involved. But the fundamental values of CEN/ISSS are always present -- flexibility, adaptability, minimum bureaucracy, openness to new ideas and efficiency in resource use and effective outputs. CEN Workshop Agreements are approved by consensus. A Workshop may decide to add its own further clarifications (such as "when do objections represent an important part of the concerned interests").

About CEN Workshop Agreements (CWAs)

The formulation is produced by appointed experts in form of CWAs which are published by the European Committee for Standardization (CEN) <http://www.cenorm.be>. CWAs are CEN copyright. Those made available for downloading are provided on the condition that they may not be modified, re-distributed, sold or repackaged in any form without the prior consent of CEN, and are only for the use of the person downloading them. Download is for free.

Workshop eCAT and strategic partnerships

For the sake of its strategic partnership with the International Information Centre for Terminology (Infoterm, <http://linux.infoterm.org>), hosting the secretariat of ISO/TC 37 "Terminology and other language resources" (<http://www.iso.org/tc37>), TermNet promotes the results of the high-level discussions in the framework of the Memorandum of Understanding (MoU) <http://www.itu.int/ITU-T/e-business/mou/> concerning standardization in the field of eBusiness. The MoU establishes a collaborative mechanism for standards required in business transactions (data interchange and interoperability) as well as product design and manufacturing. "Electronic business" is defined as the information definition and exchange requirements within and between enterprises, including customers.

The Management Group of MoU (MoU/MG), which meets a minimum of twice annually, carries out a number of tasks. Besides, these results are - whenever applicable - implemented in the project activities of TermNet, such as the projects within the framework of the Information Society Standardization System of the European Standardization Committee (CEN/ISSS).
